

IPSource™ IPsec

IP-based services such as virtual private networks (VPNs) are increasingly attractive to service providers and their customers. For enterprises around the world, IP VPNs can be a very cost-effective alternative to dedicated network connections. For communications providers, the IP VPN market holds substantial potential for revenue growth.

Today, manual provisioning is the norm in the IP service space, where networks are increasingly complex and technologically diverse. Manual provisioning is slow and error-prone. Even provisioning a small VPN can be time-consuming. Manual provisioning also requires constant vigilance by highly skilled operations personnel attuned to the myriad difficulties that can arise from changes in vendor products and industry standards.

However, when it comes to meeting all of the challenges of provisioning, activating, and managing secure VPN services, DSET has the answer - our IPSource IPsec VPN application.

Built on DSET's flexible, scalable, and reliable IPSource platform, our IPsec VPN application automates the entire process of provisioning and activating IPsec VPN services across multi-vendor networks. Designed to make the activation of services as fast and as easy as possible, this highly reliable solution can help to free you from the cost, time, and errors of manual provisioning, allowing you to focus on serving your customers and building revenues.

Freedom
from the
cost, time,
and errors
of manual
provisioning
