

Simplified Provisioning Platform

In the current competitive telecom landscape, the ability to quickly and correctly provision services for customers is critical for survival and success. Many service providers, however, have relied on manual processes that can be fraught with inaccuracies, while others have attempted to build their own solutions or utilize a patchwork of products. Ultimately, these approaches fall short and deliver little value as providers seek the best ways to address number portability, directory listing order challenges and other provisioning responsibilities.

SP Platform Overview

Simplified Provisioning (SP) Platform brings together PortIn, Directory Listings and PortOut solutions in a single web portal.

The SP Platform automates CSR, LSR/NP, LSR/DL, LSOA/NPAC, E911, CNAM and LIDB processes with a proprietary Provisioning Business Intelligence Engine (PBIE) via ONE interface.

The platform allows subscribers and agents to submit new orders, change existing orders and check order status using a point and click portal.

SP Platform Benefits

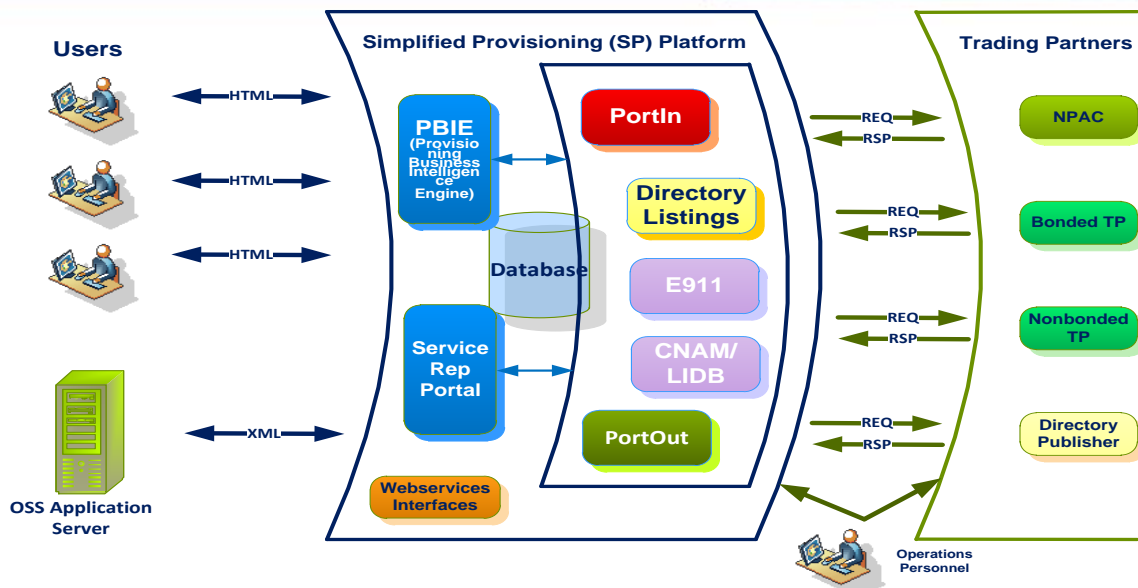

SPP provides the following benefits:

- Solutions-driven Web-based portal
- Reduces order processing time
- Active work lists with real-time order processing and fallout queues
- Ensures port request is submitted to the correct old service provider
- Single portal to manage LNP processes and fallouts
- Workflow engine to automate gateway tasks
- Artificial intelligence to reduce human errors
- Dashboard helps manage business intelligently
- Reduces keystrokes
- Easy to use

**Automating
Service Delivery**
for the
Telecommunications Industry

Simplified Provisioning Platform

SP Platform Features

Port Manager allows Service Providers to automate all the functions associated with porting a new customer onto their networks. SP Platform is an integrated workflow engine that seamlessly identifies the OSP and auto-generates an order to be sent electronically to OSP with a minimum of keystrokes.

DL Manager gives your customers the ability to place a service request to change the existing listing information and view the status of their orders.

PortOut Manager meets all the requirements mandated by the FCC for 24-hour porting in a single interface and can be automated into your OSS to eliminate manual handling. If the New Service Provider (NSP) is trying to port a number from you that does not comply with your business rules, the portal can reject the order upfront without human intervention.

Why DSET?

- Deep industry knowledge with an average tenure of ten years for all DSET Engineers
- Participates in all Industry meetings
- Multiple pricing models to fit the lifecycle of your business
- Global company with local presence
- Various SaaS models to suit your business needs
- Most comprehensive suite of LNP solutions in the industry
- Privately held company with strong financials
- Best-in-industry technology, service and pricing guarantee
- Industry's first mutual SLA

Other DSET Solutions

- LNP Porting
- Wholesale Portal
- Directory Listings
- LNP Dipping
- Self Service Portal
- Provisioning Platform

DSET Product Suite

- ezLocal (LSR) Gateway
- ezWinCSR (CSR) Gateway
- ezNumberPort (LSOA) Gateway
- ezTriplets (911/CNAM/LIDB) Gateway
- ezAccess (ASR) Gateway
- ezLongdistance (CARE) Gateway
- ezLSMS Gateway
